

Date: 28/9/06

Patient: Mst. Shreejit Nair Aged: 8 yrs
3296-1091

Illness: Frequent bouts of cough-n-cold.

Duration of treatment: 3 yrs.

Percentage of recovery: 90%.

Since he was 4-5 yrs old, our son was given to suffer frequent bouts of cold-n-cough. Though allopathic medicines provided immediate relief, the same was not lasting enough as even a slight change in climate would bring back the problems with increased intensity.

Thanks to Dr. Mehra's Homoeopathic treatment, the problem is not only under control but we too can now dare to take chance even giving him cold stuff like ice-cream which was hitherto totally out of bounds for our son.

We decided to continue the treatment ^{for 2-3 yrs} even though there was relief within the first couple of months of treatment in order to stabilise his system.

Of course, medicines have to be accompanied by a bit of care-n-caution in terms of diet as advised by the Doctor & this has given our son (& us) lot of relief and a strong foundation to take on the vagaries of food and climate as of this day and age.
