

Chronic Allergic Rhinitis

Khushita Jain (Baby Girl) - Tel no [REDACTED]
Age of patient at the time treatment started
was 2.5 months old.

The treatment of my daughter took about 4 months to recover. She was having cold & nose block on continuous basis since the time of her birth because she ~~not~~ inhaled some water which went in her lungs at the time she was delivered. She was on continuous medication (Allopathy). Her Nana ji (Child Specialist doctor) suggested to start Homeopathy treatment.

The percentage of recovery from Respected Doctor - Sunil Mehra's treatment was 98%. Rest 2% recovery, I feel depends on external factors like - how the child is taken care by its parents, weather change or sometimes climate change on travelling to a different place, body reaction of a child on diet taken.

As a mother of my first child who is now 6 months old, I learned a lot of things from doctor's experience to take care of my child in unique manner so that my child's illness does not return very easily and she stays fit.

Khushita experienced a gradual recovery because she was slowly adapting homeopathy treatment which resulted fruitful for her and she left far behind the doses of Allopathy treatment given earlier to her.

The doctor is conveniently available 6 days in a week
See below Next page P.T.O.

at his clinic. If by any reason we are not able to go to the clinic (except for the first time) we can easily ask his advice on ~~the~~ telephone or by sms. Regarding any queries related to the health of the patient or medication we are satisfactorily answered or serviced on phone and sms.

The doctor is reliable, has knowledge of his work and treats the patients with care and gives full time to the patient till he/she is satisfied.

The compounders are well-mannered & helpful.

I am writing this feedback at a stage where my child's weaning is just started, but I am sure if I follow the simple rules of how doctor guided me for weaning my child will get adapted to the healthy, clean and good food habits.
