

Eye → Blood clot, Viral Infection

Rami Sawhney.

I had severe eye blood clot and the same day I visited Dr Sunil Mehra. My eye was blood shot and half Right eye was involved. Dr Sunil Mehra suggested me to take a opinion from eye specialist who suggested me some eye drops. There was no itching no pain only redness. The diagnosis was given as viral infection. I was worried looking at my eye but Dr Sunil Mehra pacified me and asked me to use only Homoeopathic medicine. The very next day response started and every day there was further improvement. Now after 7 days I am 90% better. We have learnt that it is wise to come to Homoeopathic doctor immediately to get fast response and if we delay and use allopathic medicines then the delay in cure is due to delay in coming to Homoeopathic doctor and not because homoeopathy is slow. And better not panic have faith in doctor.
