

Skin Fungus.

Tinea Versicolor.

Sangeeta Agarwal

Duration - started in April (2011) : Illness

Duration of Treatment - started in May (2011).

Percentage of Recovery - 95% {with ointment}.

It was in May (2011) when I started my treatment with Dr. Suril Mehra. At earlier stage I never supported that Homoeopathy could give such a fast and better result. I was forced by my husband to try this treatment and have faith in it and in doctor. As I started with the treatment initially there were big white spots on both of my hands including arms, they were really horrifying, I was really shocked at what had started to happen. As I consulted Dr. Mehra and started with his treatment the first thing which he asked me to take care was about my eating habits. He ~~was~~ recognised the symptoms and prescribed me for a better food habit. I was even asked to make a diet chart at my initial stages - months, I was really shocked at it, but as days passed I understood the importance of it and changed accordingly. His treatment method is really good and I really appreciate it. After 2 months spots started to reduce and following his pattern {not truly, but to a certain extent} I could see great results in 5 months. Currently I^{am} even applying ointment along with the medicines, just to see my final results. I hope that I am totally cured. My suggestion to others is that :
Be patient, and it will really work out.
