

17/9/2013

We met with an accident on 30th dec '11 and my daughter Meher was injured badly. She got a spinal injury of C4/C5 fracture with cord contusion. She was operated on 1st Jan '12. But she could not breathe properly and tracheostomy was done on 2nd Jan and she was put on ventilator. The doctors after operating told us that she was paralysed below the neck (Quadriplegia) and there was no chance of her walking ever and in the arms also very little movement would be there.

Next page

She would be bedridden through
out life. On 3rd My Sister told
me to start Dr Mehra's Homopathy
treatment. He gave medicines for
injury, depression, infection, UTI, voice etc.
gradually movement started coming
back and today after one and
a half year Meher is walking with
a stick. The doctors now say that
its a miracle and within another
one or two years down the line
she would be independent.

My sincere gratitude to Dr Mehra
whose medication is still continuing

Lady Grewal.
